Final Year Project :(Presently working on project)

Project Title: Student Information System

Technologies used: Java, Servlet, JSP ,Oracle 11g,HTML ,CSS ,Bootstrap and JavaScript.

Description: Student Information System is a fully responsive web application for managing student and faculty information for a particular department. The system aims to provide faculty dashboard and training placement department. The system allows to input student attendance into the database which can later be viewed by concerned faculties and students. The student may view their personal attendance and assignment submission data through a separate student login. The examination allows authorized logins to insert update timetable. The time table is then available to be viewed on the web portal. The system also allows to manage the training and placement department.

Team size: 2

Role: My role is spanned in front end development, coding and feasibility analysis.
